Dear Mr. Hon,

Using the Nylon Roller in Hactl

We have been using the “esroll” nylon rollers in one of our FMC transfer decks since 27 February 2010. After about six months’ trial period, the overall performance of the transfer deck is satisfactory and the surface of the nylon rollers is in good condition. We are also delighted with the overall service and support we have received from “Easyroll Technology (Hong Kong) Limited” in this period.

In the near future, we are pleased to consider using “esroll” nylon roller at other FMC transfer decks within our terminal.

Yours sincerely,

Toby C.K. Wong
